 - Description
 - Main road
 - Motorable track
 - Footpath
 - Water body
 - River or Stream
 - Geological_line**
 - Description
 - Geological boundary
 - Geological boundary, inferred
 - (Shear zone) (mainly from air photographs)
 - Geological_area**
 - Description, Period
 - Swamp, semi-permanent, Neogene
 - Alluvium, Neogene
 - Alluvial, Neogene
 - Red soils, Neogene
 - Undifferentiated soils generally of granitic derivation, Neogene
 - Zone of granulation; Bubu catadacites; largely granulated and sheared synorogenic granite, Precambrian
 - Synorogenic granite, Precambrian
 - Migmatitic biotite gneiss, Precambrian
 - Granular metasediments associated with Hareli-Isso complex; Bofite gneisses, quartz muscovite garnet gneisses; kyanite-muscovite schists, Precambrian
 - Quartz-feldspathic schist, Precambrian
 - Micaceous quartzite, Precambrian
 - Ferruginous quartzite, Precambrian
 - Quartzite, Precambrian
 - Quartz tourmaline (dravite)-sericite schist, Precambrian
 - Amphibole schist, Precambrian
 - Chlorite schist, Precambrian
 - Chlorite-sericite schist, Precambrian
 - Chlorite-actinolite-talc schist, Precambrian
 - Quartz porphyry, Precambrian
 - Mylonite and other catadacites, Precambrian
 - Undifferentiated; Symbols indicate dominant rock types above, Precambrian
 - Quartz-feldspathic gneiss with biotite, Precambrian
 - Quartz-feldspathic gneiss, biotite with alternating bands of amphibolite, Precambrian
 - Quartz-feldspathic gneiss with actinolite, Precambrian
 - Quartz-feldspathic gneiss with pyroxene, Precambrian
 - Hornblende-actinolite amphibolite, Precambrian
 - Plagioclase-dioctahed amphibolite, Precambrian
 - Plagioclase amphibolite, Precambrian
 - Past-orogenic granite intrusives, Precambrian
 - Gabbro, Precambrian
 - Metamorphosed basic and/or ultrabasic intrusives; silicified and ferruginized serpentinite usually veined with magnesite, Precambrian
 - Serpentine and talc schist, Precambrian
 - Amphibolite metagabbro, Precambrian
 - Water body
